no more data loss

NARBULUT

Nowadays, the cyber attacks are boundless and the technical capabilities of these attacks are developing with each passing day. Every day, we face various attacks and threats. Unfortunately, many companies realize that they are too late to take action when they face such problems. However, one of the most important responsibilities of each manager is to ensure the safety and continuity of his / her data and to take necessary precautions for this.

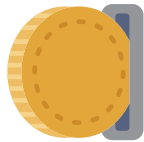

If you have no data, personnel and financial power of your business will mean nothing. Very few companies succeed to notice this. Each day, critical data of various companies are encrypted by cryptolocker virus and companies are forced to pay high costs to retrieve their data.

**YOU DATA SECURITY IS IMPORTANT TO
US AS IT IS TO YOU!**

Central Management

From customized panel on Narbulut, you can easily manage cloud backups on all authorized computers and easily control the processes. You can create user groups and define specific policies for these groups.

Decreasing Costs

Companies need to invest hardware and software products at high cost for in-house backup infrastructures. Also, these systems have management costs. When you benefit services of Narbulut, you can store your data in secure manner without any additional hardware or software cost and decrease your overall IT costs.

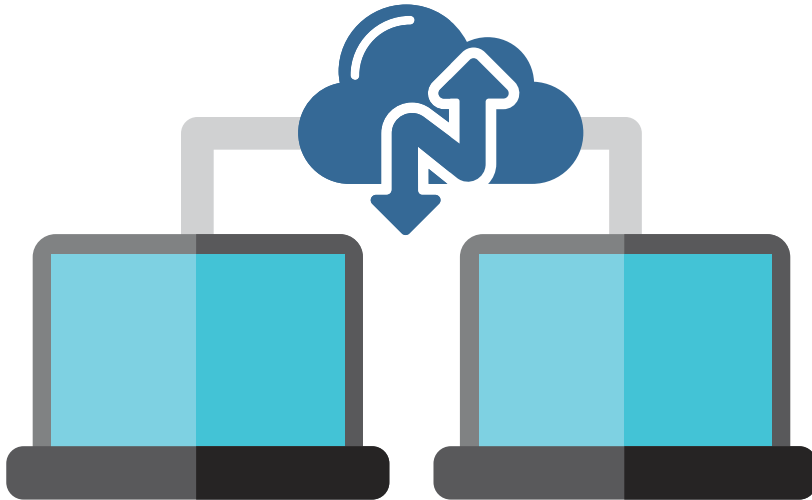

Sharing and Cooperation

With Narbulut, you can easily share your files with colleagues and create a common work environment. Narbulut will prevent manpower wastage and enable effective time use.

Scalable Storage

With Narbulut, you can choose the storage size as you need. Depending on the data of your employees, you can have different size of storage space and increase it when needed.

Expand Your Working Environment

With Narbulut, you can securely access your files when there is Internet connection and continue your work without any interruption.

Protect Your Data

You can have protection against all physical problems on data servers and computers or threats from digital environment with Narbulut.

PREVENT DATA LOSS WITHOUT ANY ERROR!

File Backup

You can start backing your works and personal files up in simple way. You can monitor those files on panel access and download them from anywhere you want. Install Narbulut application.

File Sharing

You can send your files to people outside your company with shared links even if those people are not Narbulut users. You can set expiry data on your shared files and restrict user access.

File Security

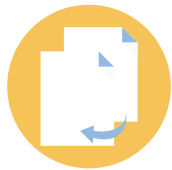

With Narbulut, your files will be stored on the cloud. You can access those files from any device with Internet connection. If you lose your computer, your files will be safe. You can easily recover your files by selecting any version you need.

File Management

Including synchronization management, you can control the folders of your employees. You can easily determine the folders you want to back up from management panel.

YOUR DATA IS ALWAYS SAFE AND UP-TO-DATE!

File Extensions

You don't need to store unnecessary or undesired files on the cloud. You can easily define which file extensions you want to back up for all users from single panel and easily manage those extensions.

Audit Logs

You can easily monitor how your data is shared between employees and with people outside your company with audit logs. You can also control which operations were made by your employees on management panel. You can define authorization for customized security precautions.

Delta Synchronization

This property is an advanced one that speeds up the transfer of updated files. It enables to send updated portions of the file instead of sending entire file.

Data Integrity

This property indicates how well the copy of a file matches with the original. During matching operation, transfer errors may decrease data integrity and corrupt the data. Your files are verified with the original ones.

Single Copying

This operation searches for identical stored files before transferring. If a file matching in a server is found, automatic copy is created without transferring the data.

Compressing

This operation compresses the files. It is used to reduce the size of transferred data. By this way, the transfer is completed faster.

TRANSFERS

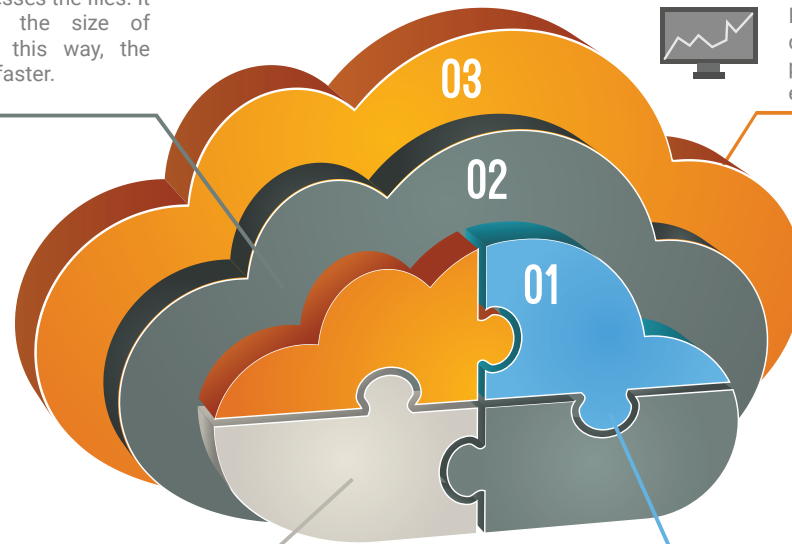

This operation compresses the files. It is used to reduce the size of transferred data. By this way, the transfer is completed faster.

APPLICATION AND PANEL

It enables to select the settings that will be defined on the computer of end user. With this property, you can manage the application on end user's device.

SSL / TLS

Secure Socket Layer / Transfer Layer Security are two common methods for data encryption for Internet transit. SSL is precursor of TLS. Your files are transferred on this layer.

ENCRYPTION

This operation makes your data unreadable. By this way, only authorized users can read the data. While data is being sent to the cloud, it is converted from readable form to encrypted form. When data is sent to users back, it is converted to readable format with decryption.

Administrator Panel

Use the "groups feature" to create and manage the member lists for your Nar Cloud account. Start backup on new employee computers with just couple of clicks. You can easily manage data of your employee from a single center. You can view the current status by authorization and selecting the folders. With constantly developing administrator panel of Narbulut, you can easily audit your data and monitor status reports.

E-Mail Backup

You can easily back up mails of Pop3 E-Mail account users. Pop3 mail servers do not store copy of e-mails, This may cause data loss. You can eliminate this risk by using NarBulut.

SQL Backup

Backing applications up that use MS SQL database, and controlling these applications may have additional burden. According to the timer you specify, you can easily store only the changes of your database to Narbulut and you can control these. When you need, you can easily recover your files from wherever you are.

Flexible Storage Space

Do not pay extra for storage you are not using. You can get as much storage space as you need, and you can expand it as you want. You can pay as you use and determine your costs based on your needs.

Management

Manage and access from everywhere.

Versions

Access and return versions of your files.

Sharing

Share your files inside and outside your business.

E-Mail

Backup your e-mail.

Database

Backup your database.

Flexibility

Determine the area you need.

Filtering

Backup data type you need.

Event Log

Monitor user activities.

Installation

Install and start using.
